Top 10 Commodities by Total Import Value

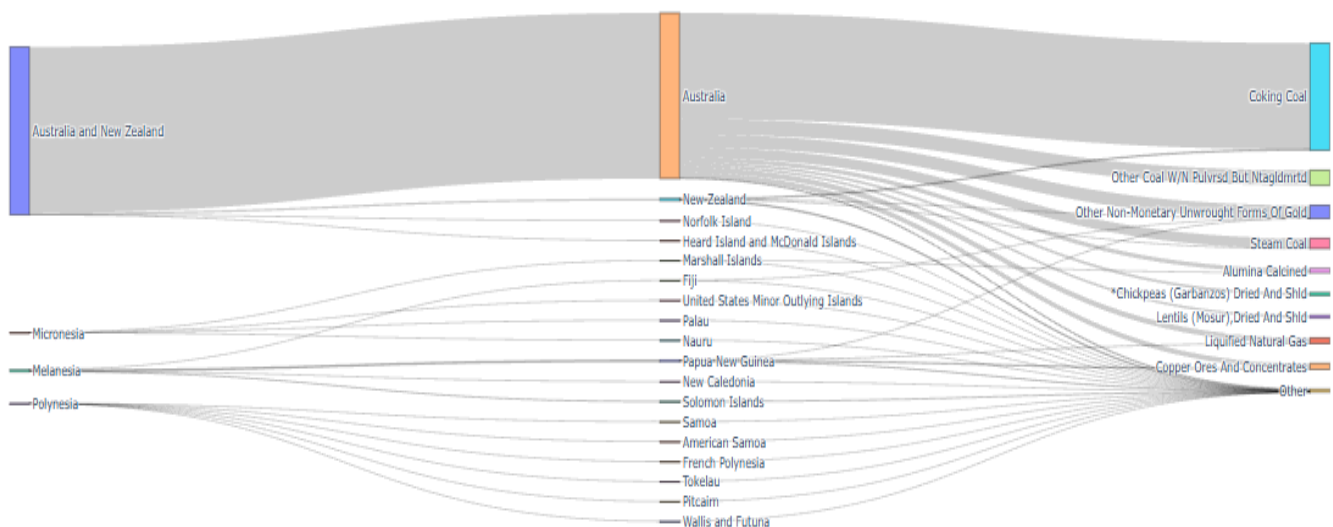

Year-wise Total Import Value of India from Oceanic Countries

Share of Total Import Value by Sub-region

Flow of India's Imports: Sub-region → Country → Commodity

- Australia is India's dominant trading partner in Oceania.
- Australia alone contributes the majority of India's import value.
- Coal is the most imported commodity, highlighting India's dependence on imported energy resources.
- Gold, LNG, copper ores, and alumina are important industrial imports.
- More than 97% of imports originate from Australia and New Zealand.
- Import values recovered strongly after the COVID-19 period.
- Most transactions are low-value imports, while only a few large transactions contribute significantly to the overall import value.
- The positive relationship between import quantity and value suggests that larger shipments generally result in higher import expenditure.
